Summary

I'm a **Computer Engineer** holding a **Ph.D. in Electrical Engineering** with a focus on Electric Power Systems - **Electricity Markets** with a solid background in **math optimization, planning in energy markets and coding**, demonstrated by **professional and research experience** and by multiples **publications** in **conferences** and in International **Scientific Journals**.

Education

Universidade Estadual Paulista – UNESP

Bauru, SP, Brazil

Ph.D. in Electrical Engineering

Jan. 2021 – May 2025

- Focus on: Operational Research, such as, Stackelberg Game (bilevel modeling - MPEC), Equilibrium Models (Nash, EPEC) and Electricity Markets, such as, Strategic Offering Models, Equilibria among strategic players.

The Ohio State University – OSU

Columbus, OH, USA

Visiting Ph.D. Scholar Researcher

Nov. 2022 – Apr. 2023

- Focus on: Operational Research, such as, Stackelberg Game (bilevel modeling - MPEC), Equilibrium Models (Nash, EPEC) and Electricity Markets, such as, Strategic Offering Models, Equilibria among strategic players.

Universidade Estadual Paulista – UNESP

Bauru, SP, Brazil

M.Sc. in Electrical Engineering

Aug. 2018 – Dec. 2020

- Focus on: Operational Research, such as, Stackelberg Game (bilevel modeling - MPEC), and Electricity Markets, such as, Strategic Offering Models, Equilibria among strategic players.

Centro Universitário Católico Salesiano Auxilium – UNISALESIANO

Araçatuba, SP, Brazil

B.Sc. in Computer Engineering

Aug. 2013 – Mar. 2018

Research Experience

A study of an equilibrium among strategic producers and consumers (Sponsored by CAPES).
(co-advised by Dr. Antonio J. Conejo and Dr. Leonardo Nepomuceno)

Aug. 2023 – May 2025

With this study we found out that regardless of all players being strategic, depending on their size, the equilibrium may benefit the larger producer or consumer when a market is made of strategic player (producers and consumers) relatively with the same size, the equilibrium among the strategic players leads to the same results of Perfect Competition among players. To this study we used:

- A single model reformulation of strategic bilevel models of producers and consumers in equilibrium, coded in GAMS.

Solving a bilevel strategic offering model in a hydrothermal energy market (Sponsored by CAPES)
(co-advised by Dr. Antonio J. Conejo and Dr. Leonardo Nepomuceno)

Jan. 2020 – Dec. 2023

With this study we found out that the strategic behavior from a large generation company forces the market clearing prices to higher prices, thereby increasing either the strategic and non-strategic companies' profits and reducing the consumer utility. Also, such strategic behavior leads to water savings to the strategic company reservoirs due to the reduced power output from the strategic company's hydro plants. To this study we used:

- A Stackelberg Game bilevel model considering an entire market clearing model as a lower-level model to the strategic company upper-level model and introducing a convexification approach, implemented in GAMS.

Professional Experience

Universidade Estadual Paulista – UNESP

Bauru, SP, Brazil

Created and Lectured a course: Coding in GAMS with focus on Electricity Markets

Feb. 2025 – Mar. 2025

After my time in the USA at The Ohio State University I've created this course to spread the knowledge in my university campus in Brazil to help students with their own Ph.D. research modeling problems, where I:

- Lectured general concepts of coding in GAMS and its structure.
- Lectured about overall aspects of electricity markets.
- Introduced the ideas of perfect competition versus strategic behavior in electricity markets.
- Introduced the concept of optimization models in equilibrium.
- Lectured about Stackelberg game structures and bi-level formulation as an approach to behave strategically.

João Augusto Silva Lêdo

- Lectured about multi-leader-follower game structures and Nash equilibrium in competitive electricity markets.

The Ohio State University - OSU

Columbus, OH, USA

Visiting Ph.D. Scholar Researcher

Nov. 2022 – Apr. 2023

- Modeled a bilevel strategic offering model for a generation company in a hydrothermal energy market.
- Participated to weekly meetings under the development of Stackelberg Game bilevel strategic offering model.
- Attended to class covering topics such as complementary theory and applications, optimality and complementarity, Equilibria, MPECs and EPECs.

Universidade Estadual Paulista – UNESP

Bauru, SP, Brazil

Assisted in Electrical Power Systems I Class [Online]

Nov. 2022 – Feb. 2023

- Assisted the Professor in charge to elaborate and grade the students' homework.

Universidade Estadual Paulista – UNESP

Bauru, SP, Brazil

Created and Lectured a course: Logic and Structure with practice coding on MATLAB

Oct. 2021 – Dec. 2021

As a Computer Engineer I focused on breaking down advanced concepts of coding to help Ph.D. students on my campus, with many different backgrounds, to have a clear vision on how to code strategically, where I:

- Lectured general concepts about computer science and coding such as math and logic operators, data types (int, float, char, structure), routines and functions.
- Lectured on how to wisely structure an algorithm in routines to easily accomplish its goals.
- Lectured how to control data flow (if, for, while) and storage it in arrays, strings, matrices, cell-array (Tensor).
- Lectured about different rules of storage such as Line (FIFO - First in First Out), Stack (LIFO – Last in First Out).
- Lectured about object-oriented coding.
- Introduced about simple searching algorithms such as Bubble Sort, deterministic search such as Simplex and Interior-Points, evolutionary algorithms such as Genetic Algorithms and AI.

Universidade Estadual Paulista – UNESP

Bauru, SP, Brazil

Assisted in Numerical Calculus Class

Mar. 2020 – Aug. 2020

- Assisted the Professor in charge to elaborate and grade the students' homework.

Skills & Interests

Technical: GAMS, OPL-IBM CPLEX Studio, MATLAB, C, C++, Ruby, Python, LaTeX.

Mathematical Optimization: Stackelberg Game, Nash Equilibrium, Mathematical Programming with Equilibrium Constraints (MPEC), Equilibrium Problem with Equilibrium Constraints (EPEC).

Language: English, Portuguese
